SET · READY TO SHIP

HYPHA PASTE

BEFORE WE BUILT ANYTHING

We stayed in the problem first.

Industry
E-commerce shipping

People
Pack stations, 3PLs

Process
Pillows, peanuts, paper

Friction
Generic fit, overfill

Consequence
Damage, landfill, new laws

Then: ideas
Only after the evidence

- Evidence before ideas
- Map the whole space
- Ask where it breaks

MIND MAP

The problem space of packaging

Packaging

Materials

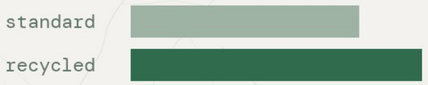

<10%

of plastic packaging is **actually recycled**

Cost

+28%

green premium for recycled plastic (+20% for paper)

Waste

434.5M t

of packaging waste a year, **projected**

Manufacturing

$50K+

for **one custom mold**, 12 to 24 weeks to make

Customer

73%

say **premium packaging** means a better brand

Sources: Materials [5][6][7] · Cost [10] · Waste [9] · Customer [11] · Mold cost and lead time from team research. Full evidence in the speaker notes; references on the last pages.

THE PROBLEM

Today, the empty space gets stuffed.

Plastic air pillows | Foam peanuts | Crumpled paper

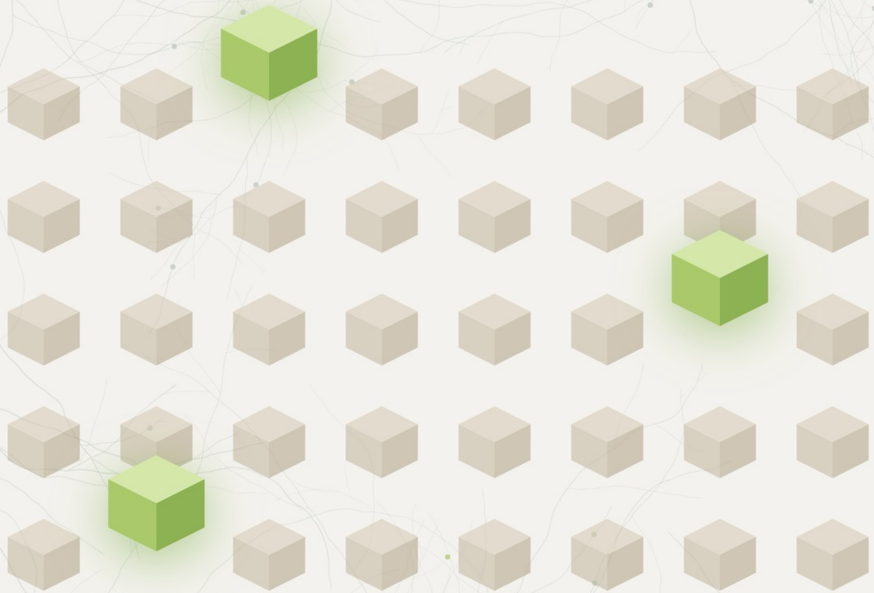

- **Generic fit**
  Products shift and break in transit
- **Rarely recycled**
  Most of it ends up in landfill
- **Under new laws**
  EPR and polystyrene bans target it

Sources: plastic waste and recycling [5][6][7] · EPR and polystyrene bans [1] · Full references on the last pages.

THE PROBLEM · WASTE

Packaging is used once, then buried.

1 box = 1% of US plastic waste

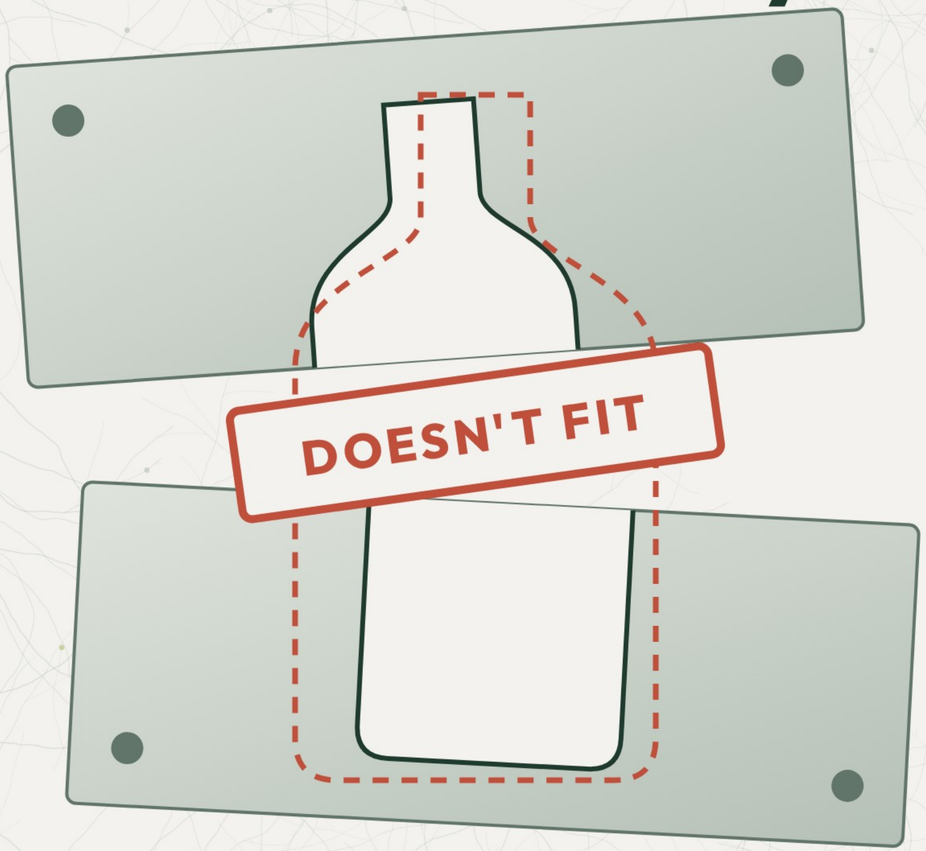

<10%

of that packaging is recycled.
The rest is buried or burned.

Sources: [5] US EPA, Plastics and Containers & Packaging data · [6] Our World in Data, "Packaging is the source of 40% of the planet's plastic waste" · [7] Beyond Plastics · [8] The Recycling Partnership

THE OTHER OPTION · CUSTOM INSERTS

A custom fit today means a new mold.

ONE CUSTOM MOLD

$200K+

starting around $50K

BEFORE THE FIRST PART SHIPS

24 weeks

0 — 12 · best case — 24

×2 Product changes? Pay it all again.

Mold cost and lead time from team research.

THE PROBLEM · CUSTOMER

The box is the brand's first handshake.

53%

came back after a great unboxing

73%

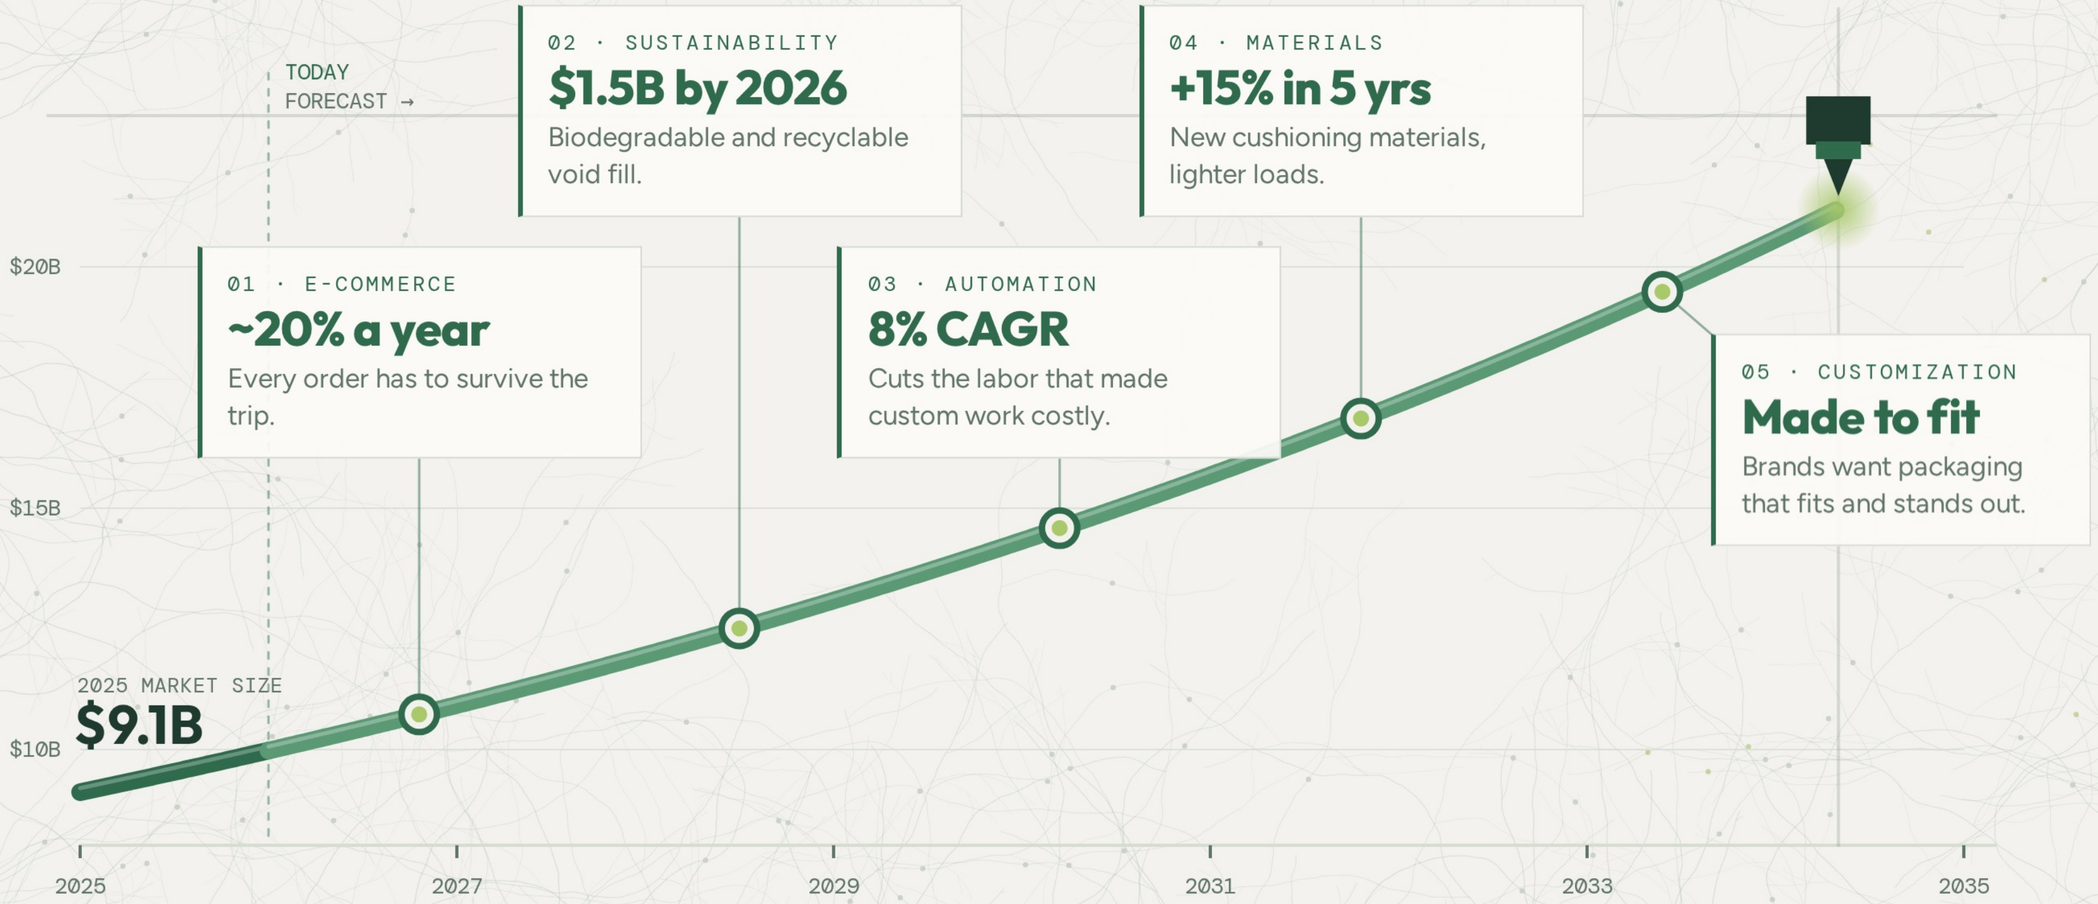

judge the brand by its packaging

It has to arrive intact. Protection is why shoppers pick boxes over mailers.

Sources: [13] 2025 study of 1,193 consumers · [14] Journal of Consumer Psychology unboxing experiments · [11] Adobe Express packaging survey · [12] Ryder e-commerce study via Packaging Technology Today

WHY NOW · US & CANADA PROTECTIVE PACKAGING

A $9.1B market, compounding.

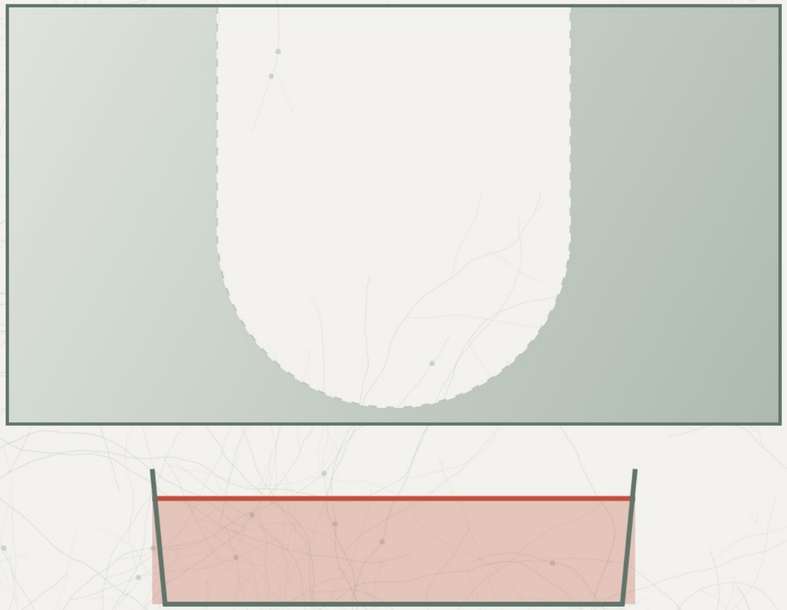

Market size: [1] Future Market Insights, US & Canada Protective Packaging Market (2025, 2035 forecast, 5.1% CAGR as reported). Drivers: [4] Market Research Future, Void Fill Packaging System Market. Curve between the two endpoints is interpolated.

THE EXPONENTIAL DRIVER WE'RE BETTING ON

Put material only where it's needed.

Cut it out

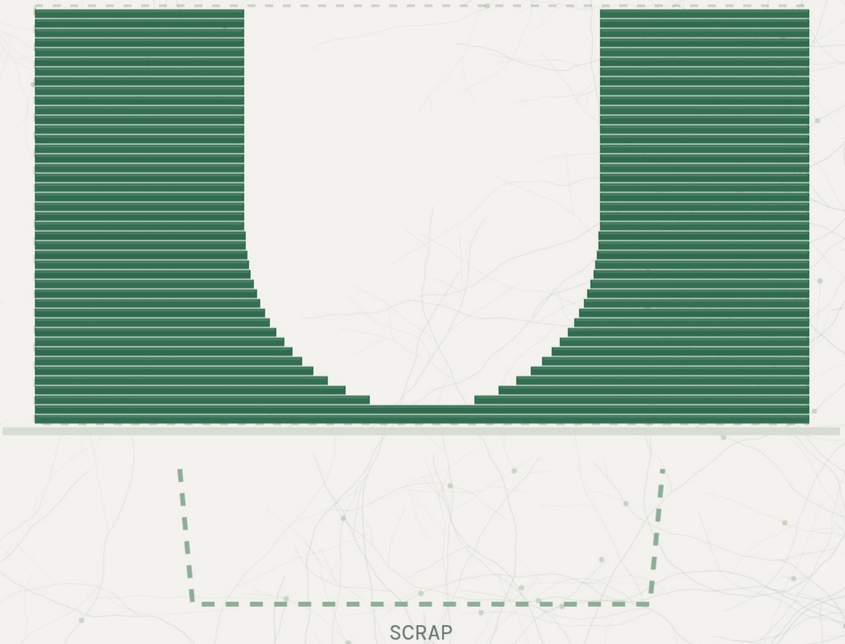

TRADITIONAL

40% of the block becomes scrap

Build it up

ADDITIVE

0% scrap, and no mold

Illustration: the scrap share is measured from this drawing, not an industry figure.

PRODUCT DEFINITION · HOW IT WORKS

Scan. Print. Expand. Return to soil.

A smart void-fill system that 3D-prints biodegradable, mycelium-based foam into the box for a custom fit.

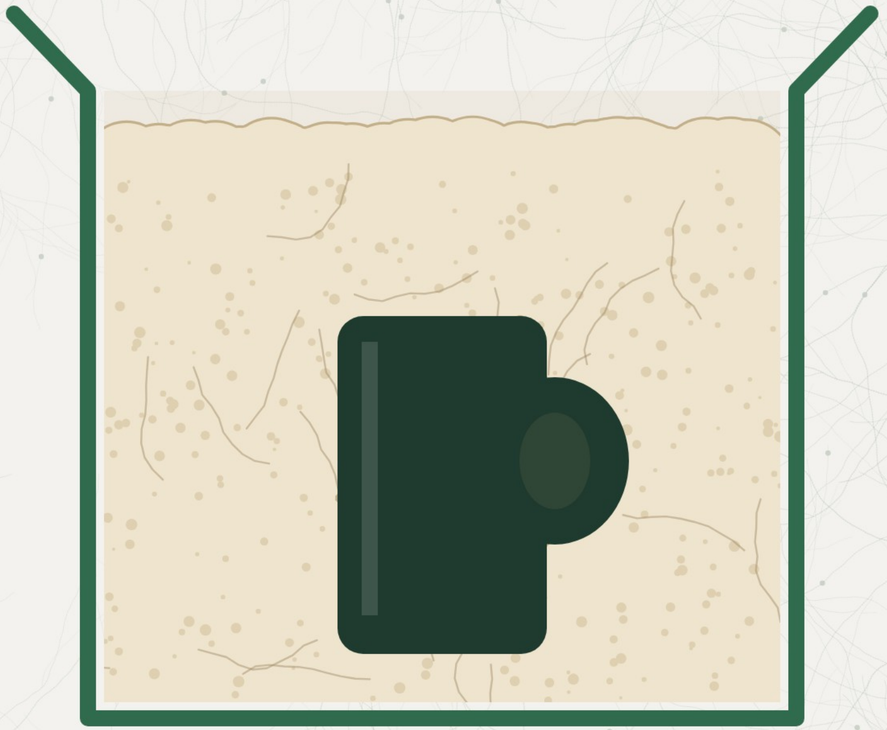

Scan
A camera maps the box and product in 3D

Print
A nozzle traces only the empty space

Expand
The paste foams and locks the product in

Return to soil
Composts at home in weeks

CONCEPT RENDER

SET · READY TO SHIP

HYPHA PASTE

THE MATERIAL

Mushroom roots + farm waste.

Mycelium
the root network of mushrooms

+

Hemp hurd
agricultural waste fiber

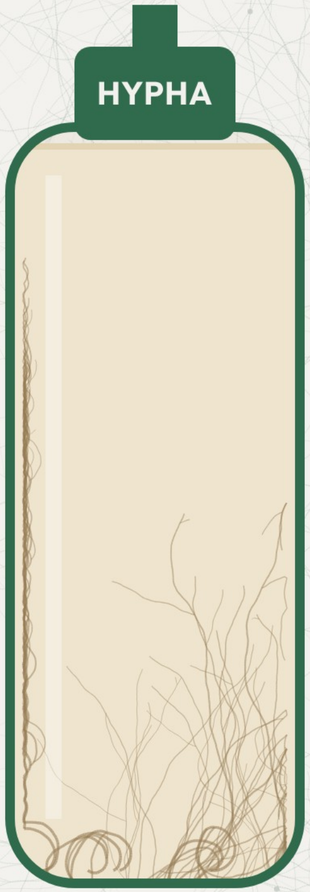

+

Corn husk
agricultural waste fiber

Home-compostable

Abundant & renewable

Refillable cartridges

REFILLABLE CARTRIDGE

COMPETITIVE ANALYSIS · SWOT

Where we're strong, and where we're exposed.

Strengths INTERNAL · HELPFUL

- The only option we found that is both made on demand and home compostable [16]-[22]
- Custom fit for every box with no molds; molded mycelium needs $2K–$9K tooling [20]
- Plastic-free material: mushroom roots plus farm waste

Weaknesses INTERNAL · HARMFUL

- No prototype yet: expansion, set time and strength are untested
- Cost per order unknown; Holiday pays ~$1 an order and caps a switch at 2× [15]
- Mycelium grows slowly (7 days for molded parts), so the paste must be pre-grown [20]

Opportunities EXTERNAL · HELPFUL

- US & Canada void fill: $1.9B in 2025, growing to $3.2B by 2035 [1]
- E-commerce is the largest use, at 42.1% of all void fill [2]
- EPR laws (CA, OR, WA) and California's 25% single-use plastic cut by 2032 push brands off plastic [1] [23]

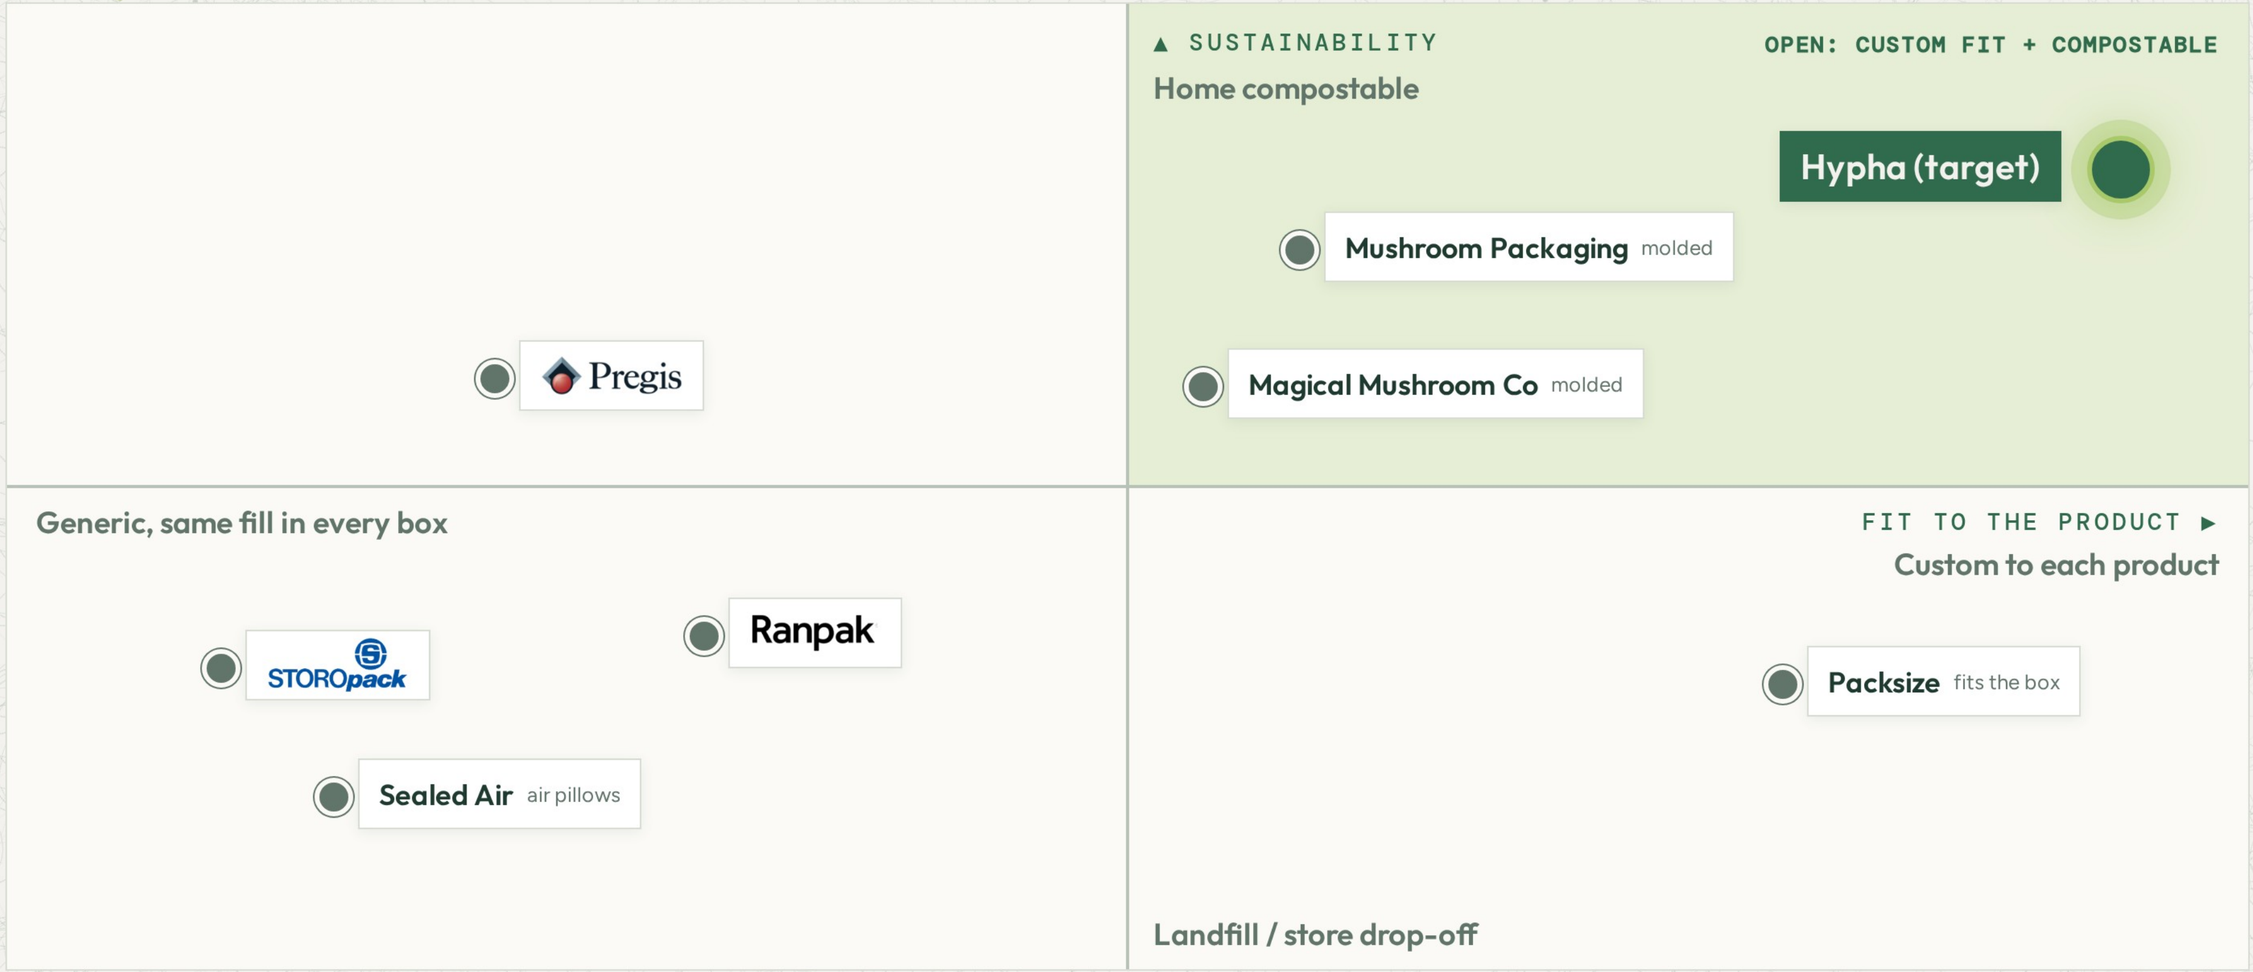

Threats EXTERNAL · HARMFUL

- Incumbents already run fill machines at the pack line; the top 3 hold 18% of the market [3] [16] [17]
- Ranpak sizes paper fill with AI vision; Packsize's right-sized boxes cut the need for fill [18] [22]
- Paper fill is cheap and curbside recyclable, "green enough" for many buyers [17] [18]

Sources: [1] Future Market Insights, US & Canada Protective Packaging · [2] Market Intelo, Void Fill Packaging · [3] FMI, Void Fill Systems Market Share · [15] Holiday interview (Group 11) · [16] Sealed Air · [17] Pregis · [18] Ranpak · [20] Mushroom Packaging · [22] Packsize · [23] Grand View Research

COMPETITIVE ANALYSIS · LANDSCAPE

Sustainability vs. fit: one corner is empty.

Placed from each company's own product page: [16] Sealed Air · [17] Pregis · [18] Ranpak · [19] Storopack · [20] Mushroom Packaging · [21] Magical Mushroom Co · [22] Packsize. Hypha's spot is a design target. Instapak and Cruz Foam are not placed: no product data in our sources.

COMPETITIVE ANALYSIS · COMPARISON CHART

Only Hypha checks every box.

	HYPHA TARGET	Sealed Air	Pregis	Ranpak	STOROpack	Mushroom Packaging	Magical Mushroom Company	Packsize
Custom fit to each product	✓	✗	✗	✗	✗	✓	?	✓
Home compostable	✓	✗	✗	✗	✗	✓	?	✗
Made on demand at the pack line	✓	✓	✓	✓	✗	✗	✗	✓
No molds or tooling	✓	✓	✓	✓	✓	✗	?	✓
Plastic-free	✓	✗	✗	✓	✓	✓	✓	✓

✓ Yes ✗ No ? Not stated Logos link to each company's page.

From each company's own page: Sealed Air [16] · Pregis [17] · Ranpak [18] · Storopack [19] · Mushroom Packaging [20] · Magical Mushroom Co [21] · Packsize [22]. Mushroom Packaging fits by molding each shape ($2K-$9K tooling, 7-day grow); Packsize fits the box, not the fill; Pregis Bio One is industrially, not home, compostable. Hypha's column is design targets.

BLUE OCEAN VALUE MAP

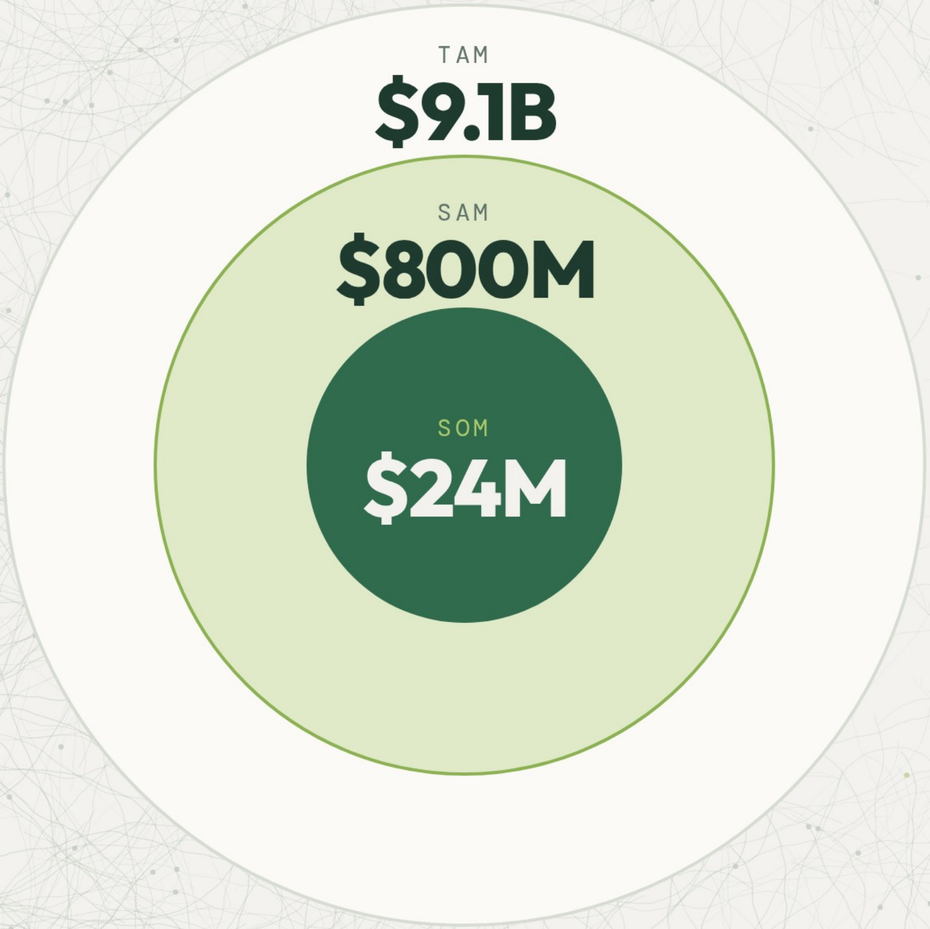

Stop competing on volume. Compete on fit.

Scores are our team's estimates, to be checked in customer interviews.

MARKET SIZE

From $9.1B to our first $24M.

TAM
$9.1B

US & Canada protective packaging, 2025

SAM
$800M

E-commerce void fill

$1.9B void fill × 42.1% e-commerce =

$800M

SOM
$24M

3% of SAM, benchmarked against today's players

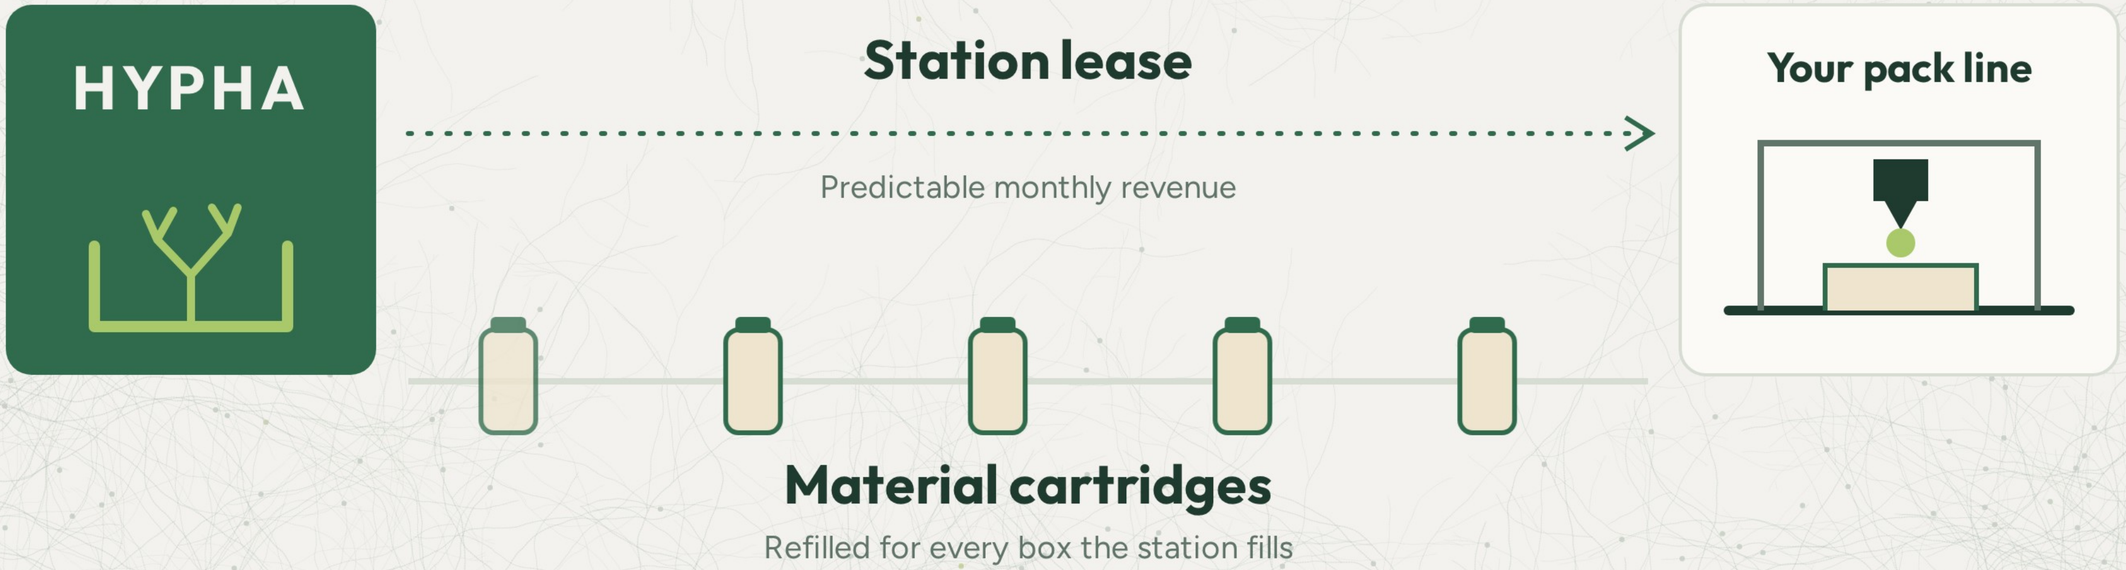

Top 10 together	36%
Top 3 together	18%
Each top-3 player	~6%
Hypha target	3%

Stretch case: 5% of SAM gives about $40M.

Circles not to scale. Sources: [1] Future Market Insights, US & Canada Protective Packaging Market · [2] Market Intelo, Void Fill Packaging Market (e-commerce share) · [3] Future Market Insights, Void Fill Packaging Systems Market Share Analysis. SOM share is our assumption.

BUSINESS MODEL

Lease the station. Sell the cartridges.

Like a printer and its ink: revenue grows with every box shipped.

VALUE PROPOSITION · GEOFF MOORE TEMPLATE

How we position Hypha.

For TARGET CUSTOMER	direct-to-consumer brands shipping fragile or oddly shaped products
who NEED PROBLEM	want to get plastic out of their packaging without risking broken orders or a cheap-looking unboxing,
Hypha is PRODUCT CATEGORY	an on-demand, compostable void-fill system
that BENEFIT SOLUTION	replaces plastic fill with home-compostable foam made from mushroom roots and farm waste, printed to fit each product so it stays locked in place.
Unlike COMPETITION	air pillows and paper fill, which are the same in every box, or molded mushroom packaging, which needs $2K–$9K tooling and a 7-day grow, Hypha needs no plastic and no molds.

Template: Geoff Moore, *Crossing the Chasm*. Competitor facts: [16] Sealed Air · [18] Ranpak · [20] Mushroom Packaging. Customer need from our Holiday interview [15]. Hypha's benefits are design targets.

VISUAL VALUE PROPOSITION

All the protection. None of the plastic.

TODAY · GENERIC FILL

The same pillows and peanuts in every box. The product shifts and breaks, and the fill ends up in landfill.

WITH HYPHA · PRINTED TO FIT

Mushroom-based foam printed into only the empty space. The product stays locked in place, then the fill composts at home.

Custom fit, every box

Printed on demand, no molds

Mushroom roots + farm waste, back to the soil

Concept illustration. Custom fit, on-demand printing and home-compostability are Hypha's design targets, not tested results.

OUR VALUE PROPOSITION

Packaging shouldn’t outlive the order.

Every Hypha fill is built on one belief: **what protects a product for a few days shouldn’t sit in a landfill for years.** So we print each fill from mushroom roots and farm waste, **shaped to the product and made to return to the soil.**
